VOGELSANG

**Sludge Pump
Division**

A Smooth Operator

Another Vogelsang exclusive innovation, the HiFlo six-wing lobe design achieves unmatched efficiency in handling heavy sludge. The addition of the two extra wings gives the lobe 25% more sealing lines for our 100 series pumps. What that means to you is your pump will have a much longer lifecycle before any adjustments are required to maintain original capacity.

Our 100 series pumps are typically run at a much higher rpm than our larger 136 and 186 models. Even with increased pump speed the six-wing design virtually eliminates the pulsation typically associated with fast-running pumps. You get a consistent flow of product regardless of pump speed.

The six-wing lobe is available with all of the various lobe material options we currently offer, including: NBR, EPDM, Viton, Werobust®, or 316 stainless steel.

Six Wing HiFlo® Lobes increase efficiency and extend pump life by virtually eliminating pulsation!

**Vogelsang HiFlo® Lobes, built to last!
Contact Inside Sales for details.**

Lifeguard represents our intent to perfect pumping technology. We've solved problems of traditional pumping equipment by employing better design and materials. The results are longer life, and less frequent service than traditional pumps. Wherever you see the lifeguard icon is an area that's been researched and improved.
