

Advantages

VOGELSANG

Sludge Pump
Division

Simply remove the cover of a Vogelsang Sludge Pump to access the entire wet end without disturbing the surrounding piping.

A quick release latch on a Vogelsang RotaCut In-line Macerator exposes the blades and cutting screen for easy inline maintenance.

Tech Tip Inline Maintenance Friendly Pumps & Grinders

About Vogelsang Products:

Vogelsang HiFlo Pumps

Like progressing cavity pumps, rotary lobe pumps belong to the pump type known as positive displacement pumps. Due to its compact design, a rotary lobe pump can be advantageously used even for high discharge rates. In the following the special benefits of rotary pumps are described in comparison to progressing cavity pumps.

Vogelsang RotaCut Inline Macerators

Unlike an inline twin shafted grinder, the RotaCut offers true protection of downstream pumps, belt presses, centrifuge, digesters and other equipment by removing hard metal or stone debris from the sludge. Elements such as rags, hair or other fibrous matter is cut, not shredded, to a size suitable for downstream systems to handle.

Vogelsang Pumps makes maintenance a snap!

A pumping system is only as good as it's weakest link. Most pump manufacturers forget this fact. They spend all their time selling the advantages of their pumps, and most likely never talk to you about the after sales maintenance of the products, and quite often don't even consider them in their design philosophy.

Vogelsang is different. We design all of our products with the end user in mind. That includes the Production, Operation, Engineering, and Maintenance Departments. You can't have an excellent product if you don't. All Vogelsang pumps, macerators, and distribution technology are easily serviced in line, no need to disturb piping for simple repairs, like wet-end rebuild on pumps, or blade changes on our RotaCut inline macerator.

Simply remove the front cover on any of our pumps, and a lobe and mechanical seal change is completed in minutes. If you have ever tried to change the rotor and stator in our competitors' pump, and found yourself wondering why a repair took a whole day, you owe it to yourself to check out a Vogelsang pump and see how hours of downtime can be reduced to minutes.

Open the quick release latch on a RotaCut to change the cutting elements inline, there's never a need to send our cutter heads to the factory for reconditioning unlike our competition where regular servicing means hours of costly downtime.
