Tech Tip **RotaCut Innovation: 4 Blade Cutting Head**

Vogelsang
RotaCut®
Inline
Macerator

Introducing the 4-blade cutting assembly that now comes standard on the RotaCut 3,000, 5,000 & 10,000!

The RotaCut High performance Inline Macerator provides true pump protection by trapping hard solids, debris and grit in its collection basin before it gets to your downstream pumps and processing equipment. Solids suspended in the liquid such as hair & rags are chopped into fine pieces versus being shredded as a twin shaft grinder does.

The 4-blade cutter produces increased cutting action and a drastic reduction in wear to the blades and screen. The new cutter also allows for more rotational speed options. You can slow the unit down to reduce wear or speed the unit up to maximize performance.

We also have a 6-bladed option, [click here](#) to check it out. To find out more about the RotaCut and how it works, [click here](#).

Ask about how the RotaCut protects your pumps, digesters, centrifuge and belt press by emailing our [sales staff](#) or use our [online distributor](#) locator to find your exclusive local Vogelsang dealer.
